

Suggested Order Tracking Export

Target Release	2017R4	2017R6
Feature Request	INF-3987	INF-7403 & INF-7371
Analyst	George Sandru	
Product Manager	Will Englefield	

Business Requirement

Need the ability to capture user entered order quantities vs the system suggested order and exported data is persisted to AWS for analysis.

- INF-7371 - Suggested Order Export - Need to export all Suggested Items, including those not ordered
 - Include all items that were suggested, including those that set to zero by the user (i.e. not ordered)
- INF-7403 - Suggested Order Export - Include more details from suggested orders to AWS
 - Add more data points to the export, also ensure that all items are included in the export where:
 - Suggested Quantity > 0
 - Ordered Quantity > 0
 - Received Quantity > 0
 - In other words, the only items that are not included in this export are those items that are NOT suggested items, and are not ordered
 - All suggested items, ordered items and received items are included in the export
 - The export is only triggered when the order is received (previously in 2017R4, INF-3987), the export was triggered when the order was placed

Scenarios being solved

Scenario #	Item Suggested	Item Ordered	Item Shipped	Item Received
1	Y	Y	Y	Y
2	N	Y	Y	Y
3	N	N	Y	Y
4	Y	Y	N	Y
5	N	Y	N	Y
6	Y	N	N	N
7	Y	N	Y	Y

Note: In some of these cases zero is a valid value

1. Normal process for a Suggested Item:
 - a. Item Suggested, Item Ordered, Item included in ASN, Item Received
 - b. *Note: A received value of zero is valid, for example item goes through the process, and gets dropped during delivery, so it not received. But this is recorded as 0 (zero)*
2. Normal process for an Item that is NOT suggested:
 - a. Item Ordered, Item included in ASN, Item Received
3. Substitute item, added on ASN. (for example 20oz cup ordered, 20oz Peach Shake Cup shipped)
 - a. Item included in ASN, Item Received
4. Suggested Item for Local distributor (in other words NO ASN is sent from the distributor)
 - a. Item Suggested, Item Ordered, Item Received
5. Item not Suggested for Local distributor (in other words NO ASN is sent from the distributor)
 - a. Item Ordered, Item Received
6. Item is suggested, but it is not ordered, therefore it isn't on the ASN, and it is not received
 - a. Item Suggested
7. Item is suggested, but not ordered. The manager realizes that they need the item, so call the distributor. Although the item wasn't

included on the order sent to the distributor, they add it to the order, which means that it gets added to the ASN.

- a. Item suggested, but not ordered, Item added to ASN, Item Received

Results of Scenario Testing

Order Manually Received - No ASN

Suggested Items - Before any edits			Suggested Items - After edits		
Description (Code)	Unit	Quantity	Description (Code)	Unit	Quantity
CHICKEN, BREAKFAST FILETS (030004)	36 Lb Case	0	CHICKEN, BREAKFAST FILETS (030004)	36 Lb Case	0

Implementation

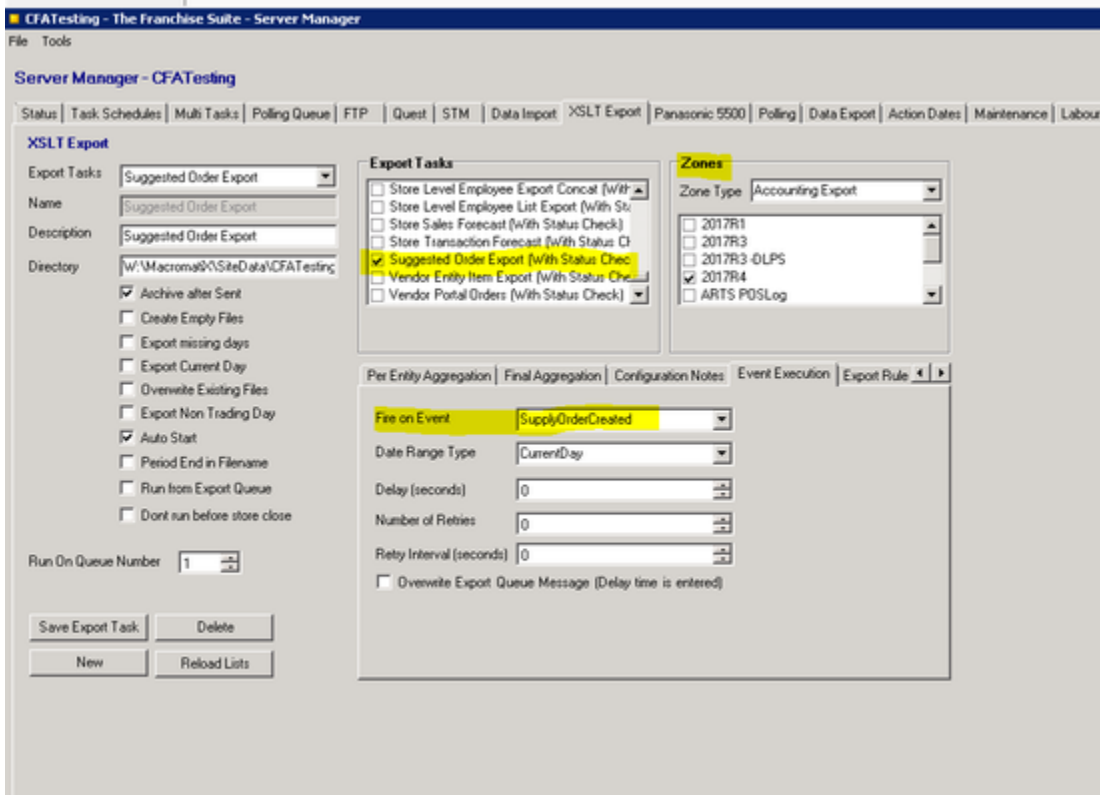

1. When a PO is successfully received, an export file is generated, which contains data that is relevant to the order that was submitted
2. The export should contain both the Suggested Quantity and the Ordered Quantity for all items in the order
3. If the item is not a suggested item, a Suggested Qty of zero should be exported
4. If the Suggested Quantity is zero, a Suggested Qty of zero should be exported
5. If the Suggested Qty = The Ordered Qty, both values should be exported
6. If Suggested Qty \neq 0 and Order Quantity = 0, both values should be exported (This was implemented as INF-7371 with 2017.R6)
7. If an order goes On Hold, the export should not be exported until the order is successfully re-submitted and received

User Interaction

When the purchase order is successfully submitted, the export is generated on Server Manager in an XML file and persisted to the AWS Endpoint

Configuration

1. Store needs to be configured in the export Zone

Vendor must include the **Since** Date in order for the suggested values to be exported

The screenshot shows the 'Suppliers' management interface in the InFORM system. The page is titled 'Suppliers' and features a navigation menu on the left with options like 'Sales Analysis', 'Accounting', and 'Admin'. The main content area is divided into several sections:

- Organization:** Name (THE MARTIN-BROWER COMPANY), Relationship (3rd Party Organization), Type (Distributor), Rating (Preferred), and various contact details (Phone, Fax, Contact, Orders, Email, Split).
- Addressing:** Street Address, Mailing Address, and Loading Dock Address, each with fields for Street, City, State, and Country.
- Services:** A list of services including 'Sinks' (set to 10/1/2017), Main, and Other.
- Accounting Information:** Tax Code (No Tax), Terms Code (30 Days), and other financial parameters.

Export Format 2017.R6:

```

<?xml version="1.0" encoding="utf-8"?>
<SuggestedOrder xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema">
